CORPORATE COURSE PROGRAMME

SAP ABAP Developer Training

ABAP programming for reliable business applications

01	02	03	04
ALIGN	**BUILD**	**APPLY**	**REVIEW**
Team goals	Foundations	Workplace practice	Learning evidence

Shared foundations. Practical application. A programme built around your team.

DESIGNED FOR YOUR ORGANISATION

Dedicated employee group | Agreed learning objectives | Flexible delivery planning

START WITH A SHARED LANGUAGE

Build confidence before the core curriculum.

Who this programme is for

- ABAP developers and technical consultants
- SAP support and application teams
- Programmers beginning ABAP study

Foundation topics

- ABAP types and program structure
- Structures and internal tables
- Database access and authorization needs
- Object orientation, exceptions and debugging

What your team can develop

- Choose suitable data types and access patterns
- Improve debugging and test design
- Discuss maintainability and authorization
- Understand environment and released-API constraints

CORE LEARNING MODULES

Learn the concepts. Apply the reasoning.

MODULE 01

Language and environment

- Development tools
- Types and expressions
- Control flow and internal tables
- Modular programs

Learning outcome: Explain language and environment and use the covered concepts to reason about a practical scenario.

MODULE 02

Data access

- ABAP SQL
- Data dictionary concepts
- Relationships
- Efficient queries and authorization context

Learning outcome: Explain data access and use the covered concepts to reason about a practical scenario.

CORE LEARNING MODULES

Learn the concepts. Apply the reasoning.

MODULE 03

Object-oriented ABAP

- Classes and interfaces
- Encapsulation and inheritance
- Exceptions
- Reusable components

Learning outcome: Explain object-oriented abap and use the covered concepts to reason about a practical scenario.

MODULE 04

Modern development

- ABAP Cloud and clean core
- Core Data Services
- RAP business objects and behavior
- Service exposure

Learning outcome: Explain modern development and use the covered concepts to reason about a practical scenario.

CORE LEARNING MODULES

Learn the concepts. Apply the reasoning.

MODULE 05

Quality and delivery

- Debugger techniques
- Unit tests
- Static checks and performance
- Transport and lifecycle concepts

Learning outcome: Explain quality and delivery and use the covered concepts to reason about a practical scenario.

MODULE 06

Practical learning

- Original programming exercises
- Reviewing AI-generated code
- Data confidentiality
- Next-step learning plan

Learning outcome: Explain practical learning and use the covered concepts to reason about a practical scenario.

FROM KNOWLEDGE TO ACTION

Make learning relevant to your workplace.

Course-specific team exercise

Read and process a set of business records, diagnose a performance issue and test a calculation with boundary cases in an agreed SAP environment.

01	02	03	04
ALIGN	**BUILD**	**APPLY**	**REVIEW**
Team goals	Foundations	Workplace practice	Learning evidence

Before training

Agree roles, experience levels and team objectives. Use an initial knowledge check to identify the foundations that need attention.

During learning

Combine explanations, guided discussion and team practice. Use learning materials and a separate practice mock to review understanding.

At completion

Agree a final learning assessment and feedback approach. Review what employees can explain and apply, rather than treating attendance as proof of competence.

A CLEAR SCOPE BEFORE YOU BEGIN

Know what your corporate programme includes.

- Course foundations before the core modules
- Employee materials and practical exercises
- A separate practice assessment and agreed final learning review
- Certification preparation options, where relevant
- Completion recognition and an employee gift plan agreed in the proposal

Certification is a separate decision

Training supports learning and preparation. Official certification is awarded by the relevant provider under its eligibility, assessment and exam rules. Exam vouchers, official courseware, retakes and certification charges are included only when expressly stated in the written proposal.

Source and scope

This is The AgileNow proposed learning outline, not a claim of provider authorisation or an official exam syllabus. Check certification details with the provider before booking.

LET US BUILD THE PROPOSAL TOGETHER

Turn your training requirement into a clear learning plan.

Discuss your employee group, learning goals and delivery requirements before agreeing the programme scope.

- Course or combination of courses
- Employee roles, experience and group size
- Business goals and expected workplace application
- Preferred delivery, location and dates
- Materials, assessment and certification requirements
- Employee gift preference and budget
